May 7th, 2020 - this article uses the mathematical software maple for the auxiliary tool to study the partial differential problems of four types of two variables functions we can obtain the infinite series forms of any order partial derivatives of these two variables functions by using differentiation term by term theorem and hence greatly reduce the difficulty of calculating their higher order partial'

'automatic differentiation

June 2nd, 2020 - in mathematics and puter algebra automatic differentiation ad also called algorithmic differentiation or putational differentiation is a set of techniques to numerically evaluate the derivative of a function specified by a puter program ad exploits the fact that every puter program no matter how plicated executes a sequence of elementary arithmetic operations addition'
