'isotropic solid

May 3rd, 2020 - in condensed matter physics and continuum mechanics an isotropic solid refers to a solid material for which physical properties are independent of the orientation of the system while the finite sizes of atoms and bonding considerations ensure that true isotropy of atomic position will not exist in the solid state it is possible for measurements of a given property to yield isotropic results'

'properties of anisotropic materials element

April 21st, 2020 - the orthotropic material is a type of the anisotropic material which has three mutually orthogonal planes of elastic symmetry along which its characteristics remain unchanged such materials include various crystals and posite materials with a regular structure e g layered glass reinforced plastic or tissue glass reinforced plastic''properties of materials anisotropy symmetry structure
