of Glomus Jugulare Tumors**

September 7th, 2019 - The purpose of  
this report is to introduce the  
technique of superselective  
embolization SSE and to review our  
experience in surgically treating  
glomus jugulare tumors with and without  
preoperative SSE Retrospective chart  
review was performed to determine  
estimated blood loss and operative time  
and illustrative case reports are  
presented' '**PDF Endovascular  
Embolization of Head and Neck Tumors**

December 9th, 2019 - Endovascular tumor  
embolization as adjunctive therapy for  
head and neck cancers is evolving and  
has become an important part of the  
tools available for their treatment  
Careful study of tumor vascular anatomy  
and adhering to general principles of  
intra arterial therapy can prove this  
approach to be effective and safe'

'**Transfemoral Transarterial Onyx  
Embolization of Carotid**

October 17th, 2019 - We searched our  
prospectively collected database for  
head and neck tumors treated at our  
institution between 2007 and 2012 to  
identify patients with carotid body  
paragangliomas who underwent  
preoperative embolization with the use  
of Onyx'

'**Spinal metastasis from malignant  
meningeal intracranial**

---

---

December 1st, 2019 - We are the first to report one staged resection of a spinal metastasis from malignant cranial hemangiopericytoma after preoperative Onyx<sup>20</sup> embolization by direct percutaneous puncture Spinal metastases from cranial hemangiopericytoma are extremely rare Surgical morbidity of these highly vascularized tumours results mainly from excessive'

'Preoperative embolization and immediate removal of a giant

December 19th, 2019 - Giant pituitary adenomas with maximum diameter of at least 40 mm continue to involve high surgical risks despite recent advances in microsurgical and or endoscopic surgery We treated a case of giant pituitary adenoma with preoperative endovascular embolization in an attempt to reduce blood loss A 48 year old Japanese Woman presented with'

*Embolization 2008 Embolization in the Head and Neck*

January 2nd, 2017 - In this article we review current practices in therapeutic embolization of the head and neck Major applications including vascular malformations highly vascular tumors trauma and other sources of hemorrhage are discussed We emphasize the importance of a thorough knowledge of head and neck'

**'Early side effects after embolization  
of a carotid body**

December 21st, 2019 - The case of a 20  
year old woman with a carotid body  
tumor of Shamblin class III is reported  
Ten hours after preoperative direct  
intralesional embolization with 20 mL  
Onyx ethylene vinyl alcohol copolymer  
Micro Therapeutics Irvine Calif the  
patient showed symptoms of Horner  
syndrome and deficits of the  
hypoglossal and glossopharyngeal  
nerves'

**'Preoperative Onyx Embolization of  
Vascular Head and Neck**

December 15th, 2019 - Objective  
Preoperative embolization of  
hypervascular head and neck tumors is  
frequently performed to reduce  
operative times and blood loss While  
traditional transarterial embolization  
is commonly used direct tumoral  
puncture has also been advocated as an  
alternative'

**'Treatment of a Lingual Hemangioma by  
Superselective**

December 23rd, 2019 - Evaluation over  
the following year revealed no regrowth  
or symptomatology This case  
demonstrates that in selected cases  
large hemangiomas may respond  
satisfactorily to superselective  
embolization and may obviate the need  
for surgical intervention Arch  
Otolaryngol Head Neck Surg 1986 112 96  
98'

**'Paragangliomas of the head and neck  
Radiology Reference**

December 18th, 2019 - Paragangliomas of  
the head and neck are rare representing  
lt 0 5 of all head and neck tumors They  
arise in a number of locations along  
the carotid sheath and middle ear  
including the carotid bifurcation vagal  
ganglia jugular bulb and tympanic  
plexus'

---

'Impact of preoperative embolization on outcomes of carotid

December 15th, 2019 - Preoperative embolization in our hands simplifies the resection of large adherent tumors especially those located high in the neck but it does not decrease the incidence of cranial nerve injury More important most unplanned cranial nerve injuries are temporary with resolution of the neurologic deficits by 1 year after operation'

'Head neck and brain tumor embolization guidelines

December 31st, 1989 - Peri operative embolization of vascular head neck and brain tumors is an effective and safe adjuvant to surgical resection Major complications reported in the literature are rare when these procedures are performed by operators with appropriate training and knowledge of the relevant vascular and'
