### *diesel generator and diesel engine advancements*

May 24th, 2020 - the diesel engine was developed over a century ago and was instrumental in replacing the steam engine after the death of its inventor rudolf diesel the diesel engine underwent a lot of changes even today it has a great potential for modifications to make it more efficient with respect to fuel economy power output and cleaner exhaust fumes"

the engine cylinders and it is ignited by the high temperature generated through compression. Diesel engines have higher compression ratios as compared to petrol engines because it is necessary to initiate combustion. The compression ratio indicates how much the gas is compressed.

### **'diesel engines'**

**May 26th, 2020 - abstract the diesel engine invented in the late 19th century by Dr. Rudolf Diesel is the most energy efficient powerplant among all types of internal combustion engines known today. This high efficiency translates to good fuel economy and low greenhouse gas emissions. Other diesel features that have not been matched by petrol engines include durability and reliability. ### **'how diesel locomotives work howstuffworks'**

May 27th, 2020 - the hybrid diesel locomotive is an incredible display of power and ingenuity. It combines some great mechanical technology, including a huge 12-cylinder two-stroke diesel engine with some heavy-duty electric motors and generators, throwing in a little bit of computer technology for good measure. This 270,000-pound (122,470 kg) locomotive is designed to tow passenger train cars at speeds of up to 125 mph.

### **'how does a modern diesel locomotive develop power answers'**

*May 14th, 2020 - modern diesel electric locomotives are actually hybrids. The electric motor is used whenever possible to conserve fuel, and the diesel engine provides power for hill climbs and acceleration. "Type 212 submarine"*

*May 27th, 2020 - the German Type 212 class, also Italian Todaro class, is a non-nuclear submarine developed by Howaldtswerke/Deutsche Werft AG (HDW) for the German and Italian navies. It features diesel propulsion and an additional air-independent propulsion (AIP) system using Siemens Proton Exchange Membrane (PEM) hydrogen fuel cells. The submarines can operate at high speed on diesel power or on AIP. "Smaller diesel engines are producing more power"*

**May 18th, 2020 - old school diesels run very high compression ratios (22:1 or greater) whereas recent design diesels are down around a softer 16:1. More importantly, modern common rail fuel injection systems produce accurately staged multi-phase injection of the fuel for any single combustion event rather than dumping all the fuel into the combustion chamber in one go.'**
