kids

May 26th, 2020 - a coral
reef is a type of biotic

reef developing in tropical waters although corals are major contributors to the overall framework and bulk material prising a coral reef the anisms most responsible for reef growth against the constant assault by ocean waves are algae especially although not entirely species of red algae water temperature of 20 28 c 68 82 f is an optimal'

'habitats the great barrier reef

May 25th, 2020 - prising
more than 2900 reefs some
940 islands and surrounding
waters the great barrier
reef is the largest natural
feature on the earth
covering over 348 000 km 2
the great barrier reef world
heritage area gbrwha was
internationally recognised
as being a unique area of
outstanding value to
humankind and a jewel in the
crown of the world s natural
wonders'

**'losing our coral reefs
state of the planet**

May 26th, 2020 - coral reefs
the rainforests of the sea
are some of the most
biodiverse and productive
ecosystems on earth they
occupy less than one percent
of the ocean floor yet are
home to more than a quarter
of all marine species
crustaceans reptiles
seaweeds bacteria fungi and
over 4000 species of fish
make their home in coral
reefs'

' coral reefs national
geographic society
May 8th, 2020 - coral reefs
are important ocean habitats
and offer a pelling case of
the risks of climate change
reefs provide a large
fraction of earth s
biodiversity they have been
called the rain forests of
the seas scientists estimate
that 25 percent of all
marine species live in and
around coral reefs making
them one of the most diverse

habitats in the world' '20
